## Solution: Type and Type Conversion

Here is one possible solution for the Total Sales quiz on the previous page:

### Solution: Total Sales

```
weekly_sales = int(mon_sales) + int(tues_sales) + int(wed_sales) + int(thurs_sales) +  
int(fri_sales)  
weekly_sales = str(weekly_sales) #convert the type back!!  
print("This week's total sales: " + weekly_sales)
```
