Solution: Booleans, Comparison and Logical Operators

Here is our solution for the first quiz question on the previous page:

Solution: Which is denser, Rio or San Francisco?

```
print(san_francisco_pop_density > rio_de_janeiro_pop_density)
```

Note other solutions are possible, like the one below, but take a moment to make sure you understand and appreciate the concise efficiency of the one line above!

```
if (san_francisco_pop_density > rio_de_janeiro_pop_density):  
    print (True)  
else:  
    print (False)
```
